Novel bcl-y homologues of the rat and human bcl-2 protein - useful modulating programmed cell death.

Novel bcl-y homologues of the rat and human bcl-2 protein - useful claim 2; Columns 19-22; 26pp; English.

Claim 2; Columns 19-22; 26pp; English.

The present sequence represents a mammalian bcy-1 protein.

The specification describes rat bcl-y protein (Rbcl-y) and human bcl-y protein (Hbcl-y). Rbcl-y and Hbcl-y are homologues of the bcl-2 protein thought to be involved in programmed cell death (apoptosis and necrosis).

Rbcl-y and Hbcl-y proteins may be used to treat conditions associated with a disruption of the cell death pathway. If they act as cell death inhibitors, they may be used in therapies to treat subjects suffering from: strokes, head trauma, Alzineimer's Disease, neural and muscular degenerative diseases (especially multiple sclerosis), myocardial infurction, vitally induced cell death, aging, spinal cord injuries and amyotrophic lateral sclerosis- conditions where cells under go premature cell death as a result of triggers which may or may not be apparent.

They may also be used in this way to develop cell lines which remain
This sequence represents a novel human protein, bcl-w, encoded by the bcl-2 gene family and extracted from an adult brain library. This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's disease, myocardial infarct, muscular degeneration, hypoxia, ischaemia, human immunodeficiency virus infection or in cell transplants. Up-regulation of the gene can also be used to modify cell lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w for therapy, diagnosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Rat Mol-y protein; Robl-y; human bcl-y protein; Hbcl-y; bcl-2 homologue; programmed cell death; apoptosis; necrosis; cell death inhibitor; stroke; programmed cell death; apoptosis; necrosis; cell death inhibitor; stroke; multiple sclerosis; myocardial lifarction; vitally induced cell death; aging; spinal cord injury; amplicateral sclerosis; cancer; premature cell death; cell death stimulator; prolonged cell life span; Kaposi's sarcoma; lung cancer; autoimmune; hyperimmune disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  growth e.g. cancers the standard of the bol-2 family, components the mammalian bol-y protein is a member of the bol-2 family, components in the cell death pathway. The bol-2 family have both apoptotic activity and the apoptosis blocking activity bol-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. Also, antisense constructs can be used in disorders where prevention of cell death is desired.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 FSDLAAQLHVTPGSAQQRFTQVSDELFQGGPNWGRLVAFFVFGAALCAESVNKEMEDLVG 120

Novel bol-y homologues of the rat and human bol-2 protein - useful for modulating programmed cell death bisclosure; Columns 19-20; 26pp; English.

Disclosure; Columns 19-20; 26pp; English.

The specification describes rat bol-y protein (Rbol-y) and human bol-y protein (Hbol-y). Rbol-y and Hbol-y are homologues of the bol-2 protein thought to be involved in programmed cell death (apoptosis and necrosis). Rbol-y and Hbol-y proteins may be used to treat conditions associated with a disruption of the cell death pathway. If they act as cell death inhibitors, they may be used in therapies to treat subjects suffering from: strokes, head trauma, Alzheimer's Disease, neural and muscular degenerative diseases (especially multiple sclerosis), myocardial confarction, vitally induced cell death, ading, spinal cord injuries and amyotrophic lateral sclerosis- conditions where cells under go premature cell death as a result of triggers which may or may not be apparent. They may also be used in this way to develop cell lines which remain viable in culture for an extended period. In contrast, if they act as conditions associated with prolonged cell life span such as cancer (especially kaposi's sarcoma and lung cancer) and auto/hyperimmune cell death in, and hence
                                                                                              Protein sequence of the specification.

Protein sequence of large sequence of injury; amyotrophic lateral sclerosis; cancer; premature cell death; cell death stimulator; prolonged cell life span; kaposi's sarcoma; lung cancer; autoimmune; hyperimmune disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 122 VQDMIVAYLETRLADMIHSSGGWADFTALXGDGALEDARRLREGNWA-VSTVVTGAVALG 180

The mammalian bol-y protein is a member of the bol-2 family, components in the cell death pathway. The bol-2 family have both apoptotic activity and the apoptosis blocking activity. bol-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. Also, antisense constructs can be used in disorders where prevention of cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        protein associated with Bcl.w.

Claim 2: Page 33: 52pp; English.

The present sequence is human Bcl.w, a pro-survival member of the present sequence is human Bcl.w, a pro-survival member of the Bcl-2 family which is widely expressed and which is essential for Spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl.w gene (see X25132-35) or in a gene associated with bcl.w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no

Novel bol. 4 homologues of the rat and human bol-2 protein - useful for modulating programmed cell death

Claim 1. Columns 17-18, 26pp; English.

Claim 1. Columns 17-18, 26pp; English.

C The present sequence represents human bol-y protein (Hbol-y). The specification also describes rat bol-y protein (Rbol-y). Rbol-y and Hbol-y are homologues of the bol-2 protein thought to be involved in programmed cell death (apoptosis and necrosis). Rbol-y and Hbol-y and Hbol-y are homologues of the bol-2 protein thought to be involved in programmed cell death pathway. If they act as cell death in disruption of cell death pathway. If they act as cell death in disruption of Alzheimer's Disease, neural and muscular degenerative diseases

C Gespecially multiple sclerosis, myocardial infarction, vitally induced cell death, aging, spinal cord injuries and amyotrophic lateral

C sclerosis conditions where cells under go premature cell death as a cesul to firingers which may or may not be apparent. They may also be used in this way to develop cell lines which remain viable in culture for an extended period. In contrast, if they act as cell death stimulators, collonged cell life span such as cancer (especially kaposi's sarcoma and collonged cell life span such as cancer (especially spansis's sarcoma and clusses cell death in, and hence control, parasites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The human belly protein.

Novel bcl-y homologues of the rat and human bcl-2 protein - useful PT Novel bcl-y homologues of the rat and human bcl-2 protein - useful For modulating programmed cell death homologues (clumns 15-18; 26pp; English.

The present sequence represents rat bcl-y protein (Rbcl-y). The confication also describes human bcl-y protein (Rbcl-y). Rbcl-y and Hbcl-y are homologues of the bcl-2 protein thought to be involved in conformance cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y proteins may be used to treat conditions associated with a disruption of proteins may be used to treat conditions associated with a disruption of the cell death pathway. If they act as cell death inhibitors, they may be used in therapies to treat subjects suffering from: strokes, head trauma, consecially multiple sclerosis), myocardial infarction, vitally induced cell death, aging, spinal cord injuries and amyotrophic lateral corditions where cells under go premature cell death as a consection of triggers which may or may not be apparent. They may also be consected in this way to develop cell lines which remain viable in culture for an extended period. In contrast, if they act as cell death stimulators, conditions way be used to treat conditions associated with the consection and auto/haperimmune diseases. They may also be used to cause cell death in, and hence control, parasites.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

11s likely internal to the message. CDNA Library Preparation: M.B.
Soares Lab Clone distribution: NIH BMAP CDNA clones will be made
available by the means that is soon to be determined. When NIH
determines the means for distribution of the BMAP cDNA clones, this
record will be updated accordingly when that means is determined.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (LifeTechnologies) to generate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NIH_BWAP_M_S3.1 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6:791-806, 1996)

UI-R-E1, UI-R-C0, and UI-R-C1). The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dr track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-Y0) was constructed as follows: PCR amplified cDRA inserts from previous library clones from which 3' ESTS had been derived were used as a driver in a hybridization with the normalized whole-eye library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (Life Technologies) to generate the UI-R-Y0 library. This procedure has been previously described (BODA) and SOBALES.

[5/-TGTACCAATCTGAGTGGGGGGGGGGGGGGGTT]
/couble-stranded cDNA was size selected, ligated to Eco RI
adapters (Pharmacia), digested with Not I and cloned into
the Not I and Eco RI sites of a modified pT73 vector
(Pharmacia). Library went through one round of
normalization to a Cot = 5. Library constructed by Bento
Soares and M.Fatina Bonaldo. This library was constructed
from the same fetus as the fetal heart library, Soares
fetal heart NDHH19W."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Email: mEST@mail.nih.gov
The sequence contained an oligo-dr track that was present in the oligonuclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dr track served to identify it as a clone from the normalized corpus striatum library cDNA library Preparation: M.B. Soares Lab Clone distribution: NH BMAP CDNA clones will be made available by the means that is soon to be determined. When NIH ecord will be updated accordingly when that means is determined. Seq primer: M13 Forward
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /Clone="UI-M-BH1-alx-e-10-0-UI"

Library constructed by Bob Barstead. The C2C12 cell line (avallable from ATCC, catalog # CRL-1772) differentiates rapidly, forming contractile myotubes and producing characteristic muscle proteins.
